SMP Impeller Wrench

Traditional pump disassembly methods are dangerous to workers and cause damage key pump components.

SMP centrifugal pump impeller wrenches protect workers hands by keeping them far away from the sharp impeller vanes and make it easier to separate the impeller from the drive shaft by distributing even force around the eye of the impeller.

Each SMP Impeller Wrench Kit (open, closed or combination) comes with a set of sockets to hold the 3 most common drive shaft sizes.

SMP Centrifugal Pump Impeller Wrench Kits

RenQuip Flange Spreaders

RenQuip is a new brand name out of the UK, but the tools and designs are tried and true. These are the same quality you have come to know and expect, but with a fresh look, available stock and competitive pricing.

The FSW9K is all mechanical, produces 9 Tons of force, and works great in limited clearance applications.

The FSW17M is a Maxi kit style tool with 2 separate wedgeheads, 2 hydraulic hoses and a dual port hydraulic pump capable of 34 Tons.

The FSW17P is the most popular of the RenQuip line, as it features an integrated hand pump and wedgehead. This means one mechanic has the power of 17 Tons of force in a compact design.

RAD Torque Wrenches

Compared to hydraulic torque wrenches, RAD pneumatic torque wrenches allow for significantly faster torquing times. Once the trigger is pulled RAD Torque wrenches will rotate continuously.

Pneumatic torque wrenches from RAD are also much lighter and aren't constrained by hydraulic hoses like hydraulic torque wrenches, making them easier to use and more ergonomic for the mechanic.

RAD pneumatic torque wrenches will stall right at the preset torque.

Models are available up to 8,500 foot pounds of torque.

Torque Wrenches
